SUMMARY

Entry-level AI Engineer with hands-on experience building LLM-powered applications using LangGraph, LangChain, Azure OpenAI, and AWS Bedrock. Experienced in prompt engineering, RAG pipelines, semantic retrieval, and multi-turn conversational AI systems. Currently expanding into Django for backend web development. Passionate about building real-world GenAI products.

SKILLS

- Programming Languages & Concepts: Python, OOPS
- Data Analysis & Processing: SQL, Pandas, NumPy, Data Cleaning, Exploratory Data Analysis (EDA), Dashboarding & Reporting, Data Visualization, KPI Analysis
- Machine Learning & NLP: TF-IDF, Word2Vec (CBOW, Skip-gram), Transformers (Self-Attention Fundamentals), NLP Basics, Scikit-learn, Regression & Classification Fundamentals, Statistics for Data Science
- Generative AI & LLMs: LangChain, LangGraph, Embeddings, Azure OpenAI APIs (GPT-4o, ChatCompletion, Function Calling / Tool Use), AWS Bedrock (Claude), Hugging Face, Prompt Engineering, Retrieval-Augmented Generation (RAG), Query Rewriting, Re-ranking, Hybrid Retrieval, Semantic Search, Token Tracking, Langfuse (Observability)
- Vector Databases & Storage: Qdrant, ChromaDB, Redis
- Backend & Communication: FastAPI, Django (currently learning), REST APIs, HTTP, WebSockets
- Visualization: Matplotlib, Seaborn, Power BI
- Version Control: Git, GitHub

EXPERIENCE

GenAI Trainee — In Time Tec Pvt. Ltd.

01/2026 – 06/2026

- Implemented value normalization tool using a 3-tier matching strategy — exact match, fuzzy matching (difflib), and LLM fallback — to extract structured values from free-form user inputs with graceful error handling.
- Contributed to dynamic system prompt generation that injects real-time conversation state (collected fields, remaining fields, phase) into the LLM context for accurate multi-turn dialogue control.
- Assisted in building LLM re-ranking module that scores retrieved products 0–10 for query relevance and applies vendor exclusion logic based on detected user intent.
- Worked on response builder module to generate context-aware product recommendations with gap analysis and budget mismatch warnings.
- Monitored conversational AI workflows using Langfuse for observability and token usage tracking.

Data Science Intern — ReGex Software

09/2025 – 01/2026

- Worked on data preprocessing, feature engineering, and transformation using Python and SQL.
- Solved real-world datasets to improve analytical thinking and data-driven decision making.

PROJECTS

Product Discovery Agent (PDA) – AI Chatbot (In Time Tec)

05/2026

- Built LangGraph ReAct-based conversational agent for structured requirement gathering using dynamic multi-turn prompt engineering.
- Designed hybrid RAG retrieval pipeline with query rewriting, Qdrant vector search, metadata filtering, and LLM re-ranking for accurate product matching.
- Contributed to production deployment on cloud infrastructure with Azure OpenAI (GPT-4o), AWS Bedrock, PostgreSQL, Redis, and Qdrant as core backend services.

LLM Conversational RAG Chatbot

05/2026

- Built a conversational AI chatbot using FastAPI and LangChain.
- Implemented RAG pipeline with document ingestion, chunking, embeddings, and semantic retrieval.
- Integrated OpenAI, Ollama, and Groq models using a multi-provider architecture.
- Developed conversation persistence and vector search using PostgreSQL and Qdrant.

- Containerized the application using Docker and built an interactive Streamlit UI.
- Implemented token-aware conversation history management to handle context window limitations across multi-turn sessions.

Employee Attrition Analysis

2025

- Performed exploratory data analysis on an HR dataset to identify key drivers of employee attrition across salary level, promotion status, experience, and job role.
- Engineered segment-wise comparisons (department, role, tenure) using Pandas and NumPy to surface high-risk employee groups.
- Built visualizations with Matplotlib and Seaborn to communicate attrition trends and actionable retention insights for HR decision-making.

EDUCATION

B.Tech. (CSE) — Global Institute of Technology, Jaipur, Rajasthan

2021 – 2025

CGPA: 7.7

Higher Secondary Education (RBSE) — Shiv Bal Niketan, Jaipur, Rajasthan

2021

Score: 89%

CERTIFICATES

- HackerRank 5-Star Gold Badge in SQL
